

Supplement for the TwinLife study (ZA6701)

Advice for the use of the TwinLife study:

In order to make results of analyses undertaken with the data transparent we encourage all users to grant access to all scales and indicators used in their own publications (see §6 (5) of the data usage agreement). For this purpose the user can pass on the syntax (for analyses with Stata, SPSS or R) to the data depositors – the Universities of Bielefeld and the University of the Saarland. It is planned to publish these scales and indicators via a repository.

Please send the syntax files to the following address: scales@twin-life.de.

If you have any questions concerning your own scales and indicators please use the above e-mail address to get in touch with the data depositors.
