1 How to use the codebook

The codebook includes information and frequencies of all variables that are included in the Scientific Use File of TwinLife. The variables are sorted alphabetically within content-related chapters. The codebook documents the following information for these variables: variable name, variable label, question text (from the major survey instrument - although the question text is usually identical in all survey modes, it may differ in some cases), categories (including the value labels), frequencies, data collections the variable was surveyed in, filter conditions based on the instruments used for the variable, and sources for additional information. The variable label includes information on age groups and person types surveyed. This information serves as rough orientation; for detailed filter conditions of the variable within the instrument/questionnaire, please see the filter conditions documented below the frequency table. Please note: For metric variables or variables with many categories, no frequencies are documented (except for missing categories) in order to avoid long lists of categories. The codebook is based on cross-sectional data.

2 Study description

TwinLife is an interdisciplinary longitudinal study that combines perspectives of psychological and sociological theories with behavioral genetic research. The aim of TwinLife is to examine the interplay of the genetic and environmental mechanisms that influence social inequalities over the life course. The study focuses on education and academic performance, career and labor market attainment, integration and participation in social, cultural and political life, quality of life and perceived capabilities, physical and psychological health as well as behavioral issues and deviant behavior. Therefore, more than 4,000 mono- and dizygotic twin couples from four birth cohorts and their families are interviewed alternately in person and by telephone every year. The population of the TwinLife study are families with same-sex twins in Germany who were 5, 11, 17, and 22-24 years old at the first interview in 2014 or 2015. Thus, birth cohorts are defined as follows:
subsample A: - cohort 1: 2009 - cohort 2: 2003 - cohort 3: 1997 - cohort 4: 1990/1991
subsample B: - cohort 1: 2010 - cohort 2: 2004 - cohort 3: 1998 - cohort 4: 1992/1993
More detailed information you can find on our documentation website `https://www.twin-life.de/documentation/`.

3 K2ID Supplementary Survey

The supplemental K2ID survey aimed to study early childhood education and care (ECEC) of the first cohort of TwinLife twins. The field period was from March 2015 to December 2015 (Subsample A) and from January 2016 to September 2016 (Subsample B). Subsample A includes 224 kindergartens (for 442 twins). Subsample includes 271 kindergartens (for 522 twins). Thus, a total of 495 kindergartens (for 964 twins) participated in the K2ID survey. The Short Survey covers questions on the whole ECEC center as well as the twins' group.

4 Identifiers: ECEC Ids

This chapter contains information on: ECEC Group Counter; ECEC Group ID; ECEC ID.

Question text: It is possible that more parents are interested in a place for their children than there are places available in your facility. What is the most important selection criterion according to which you then allocate the available places? (We mean selection criteria such as allocating places according to waiting lists, after discussions with the children and parents, or according to the best possible fit of the children to the group structure). [item text: Most important criterion [OPEN]]

Temporary page!

LaTeX was unable to guess the total number of pages correctly. As there was some unprocessed data that should have been added to the final page this extra page has been added to receive it.

If you rerun the document (without altering it) this surplus page will go away, because LaTeX now knows how many pages to expect for this document.
